DETAILED ACTION

PROSECUTION IS HEREBY REOPENED. A new ground of rejection is set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Election/Restrictions

The restriction mailed September 9, 2004 is hereby rescinded because the additional subject matter in claim 20 had been previously considered.

Claim Objections

Claim 24 is objected to because it does not further limit parent claim 20. Appropriate correction is required.

Claim 33 is objected to because it recites a method of compacting in the preamble, but does not recite any method steps. This is not proper; therefore, the claim has not been further treated on the merits.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 20, 23 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Muro et al. (U.S. Patent 6,132,133).

Muro et al. discloses a compactor having two spaced units (Figure 1). The compactor is powered and adjustable to permit steering. There is a belt and roller assembly configured as claimed (Figure 3), but only one of the units has this structure. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have used this configuration for each of the units in order to compact with both units or in order to more easily move over uneven terrain. Note that providing both assemblies with this configuration is simply a duplication of parts, which is not patentable subject matter.

Allowable Subject Matter

Claims 1-13 and 16-18 allowed.

Response to Arguments

Applicant's arguments with respect to claims 20, 23, 24 and 33 have been considered but are moot in view of the new ground of rejection.
